

# Thermatron industrial insulation systems

**THERMATRON, INSULATION FOR INDUSTRIAL VALVES AND TUBES.**

**THERMATRON**  
AISLAMIENTO INDUSTRIAL

In the past, it was not always easy to insulate those last components of your heat circuit or cold circuit. But thanks to Thermatron, this is a thing of the past ! The Thermatron's insulation system offers you:

Improved process control and efficiency

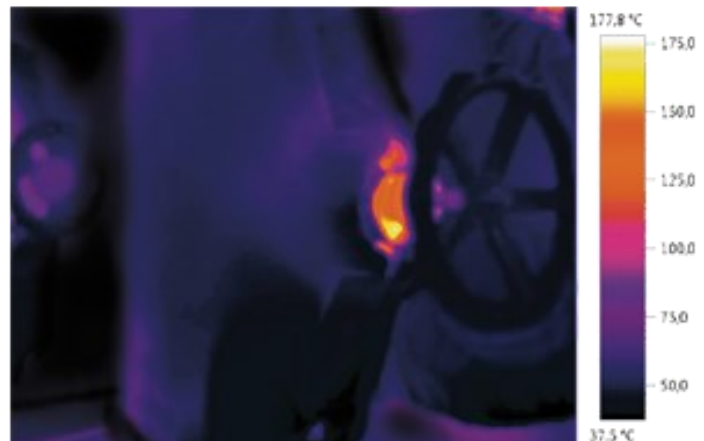

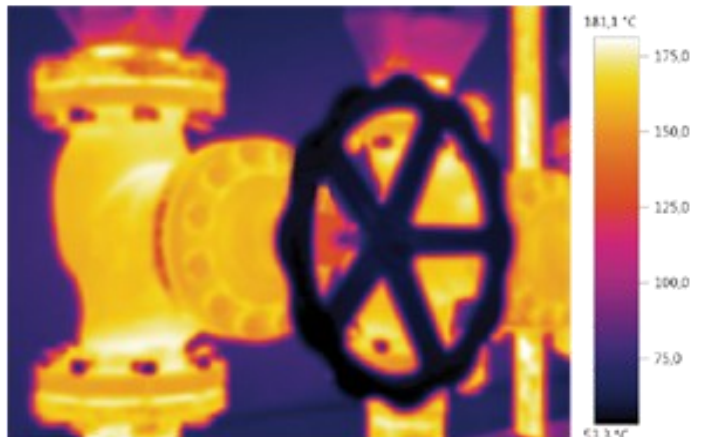

Energy savings on your heating or cold element that also leads to reduced CO2 emissions, which is better for the environment

Better protection of your personnel by insulating the last hot or cold surfaces are insulated and accidents are avoided

## DYNAMIC AND FLEXIBLE

Because Thermatron insulation is flexible and easy to install and dismantle, you need less time to manipulate the insulation, resulting in reduced maintenance costs. Thermatron uses an innovative technology for industrial insulation, and allows you to insulate all types of applications, moving away from non dismantable systems.

## SAVE COSTS WHILE INVESTING IN INCREASED SECURITY!

With Thermatron, you often save money within 12 months due to lower energy consumption. The different types of insulation belong to the latest generation of insulation material, and are adapted to different temperature ranges.

Not only do you save money, but the additional insulation also reduces CO2 emissions and creates additional protection against corrosion, thus extending the life of your installation. In addition, Thermatron insulation also contributes to better working conditions by creating a lower ambient temperature in boiler rooms and confined spaces. This benefits personnel as well as other equipment placed close to the heat source.

## THE MATERIALS USED AND THE PRODUCTION PROCESS

The materials used by Thermatron are chosen according to the industries and applications for which they will be used. In this way, Thermatron can guarantee highly effective insulation adapted to different working environments.

By using buckles and velcro, Thermatron insulation is reusable. By using technical coatings, Thermatron insulation is also washable, which is a requirement in certain industries.

## CUSTOMIZATION

In addition to standard products, Thermatron can also provide personalized products upon customer request. Possible customizations are:

- Type of material
- Choice of different colors
- Identification labels with:
- Product references
- Customer data
- Production data
- Other data such as material data
